

## **ProCell Therapies Post-Treatment Patient Instructions**

1. Take with you the remainder of the Procell MicroChanneling Serum that was used during your treatment. Apply every half- hour until the serum is gone. Micro-channels in the skin will remain open for a few hours immediately following treatment, so this serum will continue to penetrate the skin to enhance production of new collagen and elastin.
2. No applicants, makeup, or face wash should be used until bed-time.
3. When numbing wears off your skin will feel like you got a mild sunburn. You can apply a cool compress such as an ice pack (do not use creams or other topical medications).
4. With shorter needle lengths (0.25mm, 0.5mm) the skin may remain unchanged or exhibit a red glow that will likely be gone by the following morning.
5. ProCell AM/PM and Accelerator Serums should be applied daily at home to enhance results. Clean and dry face and apply a pea--sized amount to the whole face.
6. Return for a follow up MicroChanneling treatment in four weeks.
